

RISE WITH SAP LICENSING REVIEW & REMEDIATION

→ RISE right. Reduce license fee exposure with authorizations aligned to usage and security priorities.

Considering the cloud? Start by right-sizing your security model.

RISE with SAP bases license fees on the assigned level of authorizations, not system usage as it was previously. Consequently, companies with excessive authorizations face overinflated licensing costs as well as increased risk and compliance exposures.

Turnkey's Licensing Review examines actual SAP usage to produce a licensing requirements target based on the principle of least privilege. We then identify and support opportunities for role remediation or redesign to help you reduce costs, improve processes, and streamline user experience.

HOW IT WORKS

Assessment

Applying our accelerator-driven methodology, Turnkey will analyze and deliver recommendations for optimizing your SAP license utilization, including:

- Target State License Model based on actual system usage versus role allocation.
- User Analysis identifying discrepancies between assigned and utilized transactions/functions.
- Quick Win Opportunities for user or role-level remediation.
- Role Impact Assessment evaluating roles potentially requiring redesign.
- Roadmap outlining steps to achieve your optimal security and license model.

Remediation

Subject to commercial instruction, Turnkey will remediate your SAP entitlements to match your target security model.

- Role Assignment Housekeeping, removing unused and unnecessary roles
- Role Remediation, removing entitlements that contribute to inflated Full User Equivalent (FUE) license measures
- User Remediation, aligning SAP users to the newly developed authorisation solution

BENEFITS TO YOUR BUSINESS

Reduce SAP license fees

Improve process efficiency

Reduce compliance risk

Streamline user experience

Align security to business goals
